Key challenges in accurate chest X-ray diagnosis

Data Imbalance

Significant disparity in the number of normal vs. rare disease cases in clinical datasets.

Low Image Quality

Noise, artifacts, and varying exposure levels in portable X-ray scans affecting accuracy.

Disease Similarity

Overlapping visual features between conditions like pneumonia and lung opacity.

Model Generalization

Ensuring AI models perform consistently across different patient demographics and equipment.

Our AI-driven system ensures accurate diagnosis

Our AI-driven system ensures accurate diagnosis

Image Upload

Securely upload DICOM or JPG X-ray images for analysis.

Preprocessing

Automated enhancement using OpenCV to ensure high visibility.

AI Analysis

ResNet-50 & YOLO models predict abnormalities with 99% precision.

Grad-CAM AI

Visual heatmaps highlight specific regions indicating diseases.

Smart Report

Instant generation of professional diagnostic PDF reports.

Powerful AI Capabilities
Our platform combines state-of-the-art deep learning with clinical interpretability to provide the most reliable diagnostic support.
SYSTEM STATUS: ONLINE
Real-time Prediction
Instant chest X-ray analysis with sub-second latency.
High Accuracy Classification
ResNet-50 driven precision for 6+ pulmonary conditions.
Explainable AI (Grad-CAM)
Visual transparency showing exactly why AI made a prediction.
Multi-language Support
Built-in support for English, Hindi, Telugu, and more.
PDF Report Export
Generate professional medical-standard PDF reports instantly.
Mobile-friendly Usage
Responsive design optimized for doctors on the move.
Offline Support (PWA)
Analyze images even with limited or no internet connection.

CliniScan AI Diagnostic Report

Report ID: #CLN-8589
Date: 31/3/2026

Patient Information

Name: Case Study #A-102 | Age / Gender: 45Y / Male | Referral: General Radiology

Diagnosis Summary:

Infiltration

AI Confidence Score: 47.92%   Severity Level: Moderate

AI Clinical Interpretation

The analysis detected Infiltration with 47.92% confidence. Grad-CAM shows localized abnormalities in the lung fields.

Performance Metrics

Accuracy	**47.92%**

AI Confidence Score: 47.92% **Severity Level: Moderate**

AI Clinical Interpretation

The analysis detected Infiltration with 47.92% confidence. Grad-CAM shows localized abnormalities in the lung fields.

Performance Metrics

Accuracy	**47.92%**
Precision	**33.4%**
Recall	**35.8%**
F1 Score	**34.6%**
